User Interface Design EXP _ 6

Name : Keerthi Priya

Roll No :240701258

Rapid Application Development (RAD)

Rapid Application Development (RAD) is a software development approach that focuses on quick prototyping and continuous user feedback instead of lengthy planning. It is useful for developing UI-based applications efficiently.

In this experiment, RAD is used to design a mobile e-commerce application UI for browsing products and completing purchases.

Key Aspects of Task Analysis

- Understanding user
- Home, Categories, Product Listing, Product Details
- Cart and Checkout process
- Order Confirmation screen

User Flow

User Flow is a visual representation of how users navigate through an application to complete a specific goal. It shows the decision-making paths and alternate routes a user may take. In this scenario, the user attempts to complete a purchase but encounters a payment
failure and retries the payment.

User Flow for E-commerce Shopping Application

Start → Open App → View Home Screen → Browse Products → Select Product → View Product Details → Add to Cart → Open Cart → Proceed to Checkout → Enter Shipping Details → Select Payment Method → Payment Successful?

→ (Yes → Order Confirmation → End)

→ (No → Payment Failed → Retry Payment → Select Payment Method → Order Confirmation → End)

HOME CATEGORIES CART PROFILE

Step-by-Step Explanation

Step 1: Start

- The user opens the e-commerce application.

Step 2: View Home Screen

- The user views the home screen with list of products.

Step 3: Browse Products

- The user scrolls and explores available products.

Step 4: Select Product

- The user selects a product to view more details.

Step 5: View Product Details

- The user views product information such as price and description.

Step 6: Add to Cart

- The user adds the selected product to the cart.

Step 7: Open Cart

- The user opens the cart to review selected items.

Step 8: Proceed to Checkout

- The user clicks on proceed to continue purchase.

Step 9: Enter Shipping Details

- The user enters address and contact details.

Step 10: Select Payment Method

- The user selects a payment option (online payment).

Step 11: Payment Successful? (Decision Point)

- The system checks whether the payment is successful.

If YES:

- Order confirmation message is displayed.
- The process ends successfully.

If NO:

- Payment failure message is shown.
- User is given option to retry payment.
- User selects payment method again and retries.

Step 12: Order Confirmation

- After successful payment, confirmation is displayed.

Step 13: End

Result

Successfully designed a simple mobile e-commerce user interface using Rapid Application Development (RAD) methodology. The application demonstrates the complete user flow from browsing products to order confirmation with basic and functional UI design.
